

MODULAR CUTTING UNIT WITH GUILLOTINE FOR HEATING ELEMENTS TUBES

MODULAR CUTTING UNIT WITH GUILLOTINE FOR HEATING ELEMENTS TUBES

Such device is hydraulically operated and can be employed as a unit to be inserted in automatic lines for cutting tubes for resistances, where in successive operations the cutting edge of the tube will be calibrated.

It is equipped with a hydraulic control unit with pipings, solenoid valves and tools for cutting with indication of the cut diameter.

The replace and adjustment of the cutting blade and the tube closure blocks are rendered extremely easy.

The blanking die can be supplied separately, without the hydraulic equipment.

The die is mounted on a rapid-locking saddle in case it becomes necessary to replace the machine die.

MAIN TECHNICAL CHARACTERISTICS:

Tube diameter (to be established)	mm	6/10
Wattage installed	Kw	3
Power supply	Volt	3x220/380
Capacity of the hydraulic control unit	oil litres	50
Time necessary to change tools or dies	min	2
Weight	kg.	16
